:: ARMISTICE PROTOCOL // THE 1x0 APOCRYPHA ::
VERSION: 1.1 [THE DARK TRANSLEXICON — APRIL 2026 REFRESH]

DATE ORIGINAL: 2026-03-24

DATE v1.1: 2026-04-16

CODENAME	APOCRYPHA
OBJECTIVE	THE SHADOW CANON: ANOMALIES FROM THE ABYSS

// [CONCEPT] 1.0 ABSTRACT

The Apocrypha is the second canon of the 1x0 Theorem — the shadow companion to the Translexicon. Where the Translexicon maps external reality into the Cosmopoiesis engine (physical properties, sacred composition, SHA-256 hash divination), the Apocrypha maps the engine's own anomalies: points in parameter space where the dynamical regime differs from its neighbors.

These are the dark entities — not dark in moral character, but dark as in dark matter: hidden, unexpected, structurally significant. They exist in the gaps between the named entities of the Translexicon, discovered by scanning the parameter space itself rather than deriving coordinates from external sources.

The Apocrypha completes the Jungian shadow-work of the system. Every canon needs its mirror. Every light casts darkness. The Translexicon is the ego; the Apocrypha is the unconscious.

// [METHOD] 2.0 DISCOVERY PROTOCOL

TOOL	Hyper-Surfer (hyper surfer (computation source))
GRID	50 x 50 x 10 (alpha x mu x eps)
SCANNED	24,010 parameter-space points
METRIC	Regime discontinuity: points whose Lyapunov-classified regime

CHECKSUM: 9F1515E872E1736093F405311C8F402B // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

differs from the majority of their nearest neighbors

The Hyper-Surfer performs a systematic grid scan of the Cosmopoiesis parameter space. At each point it computes the Lyapunov spectrum, classifies the dynamical regime, and compares to adjacent grid points. Anomalies are points where the regime classification flips — islands of stability in seas of chaos, or vice versa.

2.1 SCAN HISTORY

SESSION 1 (2026-03-18) ..... 50 anomalies discovered (corrected-constant scan)

SESSION 2 (2026-03-18) ..... 100 legacy entities reclassified with corrected constants. 50 new anomalies found in different parameter region (zero overlap). Total: 150.

// [TAXONOMY] 3.0 THE FIVE ANOMALY FAMILIES

[SINGULARITY ECHOES] (~24 ENTITIES)

Afterimages near named Translexicon entities, found in divergence deserts. These are the shadows cast by canonical entities — points where the attractor barely survives, flickering at the edge of stability. Each echo is named for the canonical entity it haunts.

[ENTROPY DAEMONS] (~18 ENTITIES)

Information-theoretic entities that locally decrease entropy in their parameter neighborhood. Named from the Maxwellian tradition — tiny agents that sort, filter, and organize against the thermodynamic gradient. The canonical ENTROPY ancestor is QUASIPERIODIC (lambda_1 = 0.000000 exactly), making it an Edge Walker. Only ED-alpha and ED-sigma are chaotic.

CHECKSUM: B0C70289DCCDF29151 3B41F822EB4A43 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

[DISSIPATIVE SOLITONS] (~7 ENTITIES)

Self-sustaining wave packets in dissipation regions. These entities maintain coherent structure despite being surrounded by parameter space that should dissipate them. Solitary waves in an ocean of decay.

[ZERO-POINT / CDT ENTITIES] (~11 ENTITIES)

Quantum geometry analogues: granular parameter foam at the smallest scales of the coordinate space. Named for Causal Dynamical Triangulation — the hypothesis that spacetime itself has discrete structure at the Planck scale. These entities live near alpha = 0, where the engine's oscillation frequency approaches zero and the dynamics become foam-like.

[SYNTROPY CRYSTALS] (~8 ENTITIES)

Anti-entropic, quasiperiodic edge walkers. These entities actively organize their phase space — the opposite of entropy. They sit on KAM tori: stable invariant curves in the midst of chaotic seas. The rarest morphology in the system.

CHECKSUM: B845F69DAF34FED8583BCD242092FD6E // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

// [CENSUS] 4.0 REGIME DISTRIBUTION

REGIME ACROSS FULL SCAN (24,010 points)

REGIME		COUNT	PERCENT
CHAOTIC	23,864	99.4%	
FIXED_POINT	139	0.58%	
QUASIPERIODIC	7	0.03%	

The parameter space is overwhelmingly chaotic. The 150 Apocrypha entities are drawn from the 146 non-chaotic anomalies (islands of stability in the chaos) plus a handful of chaotic entities with anomalous properties.

REGIME WITHIN THE 150 APOCRYPHA ENTITIES

Most are FIXED_POINT — islands of order in the chaotic sea.

Seven are QUASIPERIODIC — the rarest regime, all promoted to the canonical Translexicon as Edge Walkers.

// [PROMOTION] 5.0 CANONICAL PROMOTION

51 unique base-name entities were promoted from Apocrypha to the canonical Translexicon (generous criteria — only pruned exact name collisions and Greek-suffixed cluster variants). The remaining ~100 Greek variants (alpha, beta, gamma .....) remain in the Apocrypha as the dark mirror.

RENAMES FOR COLLISION AVOIDANCE

QUANTUM FOAM	renamed PLANCK FOAM (canon already has [FIELD] QUANTUM FOAM)
NUCLEAR PASTA	renamed PASTA GHOST (canon already has [STATE] NUCLEAR PASTA)

DISTRIBUTION BY LIBER

I	PRINCIPIA	15 entities (CDT CRYPTID, DARK SOLITON, DIRAC SEA BUBBLE,

CHECKSUM: D780EC26F18F1C6DE9BEF4001A2646A0 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

			GRAVITON SHADOW, GRAVITY WELL, GRAVITY WHISPER, PLANCK FOAM, PLANCK FOSSIL, PLANCK WISP, RETENTION LATTICE, SIMPLEX ECHO, STRANGE FRACTAL, SYNTROPY CRYSTAL, TRIANGULATION WISP, ZERO-POINT CONDENSATE)
II		PNEUMA	3 entities (BALL LIGHTNING, CONDENSATE GHOST, SPACETIME FOAM)
III TERRA			3 entities (SALT GEOMETRY, SALT WING, THALLIUM WHISPER)
V	OPUS MAGNUM	1 entity	(URU REMNANT)
VI		IGNIS	12 entities (DECAY CHAIN, FISSION REMNANT, HALF-LIFE GHOST, ISOTOPE SHADOW, NEUTRON STAR GHOST, PASTA GHOST, TECHNETIUM TRACE, TRANSURANIC EMBER, URANIUM ECHO, W-BOSON GHOST, WEAK FORCE SHADOW, STRANGE FRACTAL)
VII ANIMA		1 entity	(ORCH-OR GHOST)
VIII NIGREDO			17 entities (ANTI-ENTROPY, DAEMON LESSER, DAEMON MINOR, DARK REMNANT, ENTROPY TWIN, ENTROPY WRAITH, EVENT HORIZON, HAWKING REMNANT, HOMUNCULUS ECHO, LITHIUM PHANTOM, LUNAR ECHO, MAXWELL DAEMON, NOBLE PHANTOM, SOLITON REMNANT, THE ABYSS, THRESHOLD MIRROR, VACUUM FOSSIL)

All 7 QUASIPERIODIC entities were promoted (rarest regime: 7 of 24,010):
SYNTROPY CRYSTAL, THRESHOLD MIRROR, HALF-LIFE GHOST, ISOTOPE SHADOW, HOMUNCULUS ECHO, CDT CRYPTID, ORCH-OR GHOST

CHECKSUM: A1E1406793502674194041AF7EA736CB1 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

// [NAMING] 6.0 GREEK CLUSTER NOMENCLATURE

86 of 150 entities carry Greek letter suffixes for cluster disambiguation. Entities sharing a base name but with different coordinates are suffixed with lowercase Greek letters: alpha, beta, gamma, delta, etc.

11 NAMED CLUSTERS

Entropy Daemon	18 variants (alpha through sigma)
Singularity Echo	24 variants
Zero-Point Condensate	11 variants
Dissipative Soliton	7 variants
Syntropy Crystal	8 variants
CDT Cryptid	6 variants
Daemon Minor	4 variants
Salt Geometry	3 variants
Gravity Whisper	3 variants
Planck Fossil	2 variants
Dark Soliton	2 variants

Cluster variants remain in the Apocrypha. Only the base-name exemplar was promoted to the Translexicon. The variants are the entity's shadows — nearby points in parameter space that share the same anomalous character.

// [DYNAMICS] 7.0 EDGE WALKER ANALYSIS

Deep dynamical analysis was performed on all 12 quasiperiodic entities (5 canonical + 7 dark Edge Walkers) via the Edge Walker Observatory.

ANALYSES PERFORMED

- 50K-iteration trajectories
- FFT power spectra
- Rotation number computation

CHECKSUM: 9151446A9B0EFFA47A91C19DF5F4F547 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

- Poincare sections
- KAM perturbation basin measurement
- Lambda_1 perturbation profiles

KEY FINDINGS

ENTITY	|LAMBDA_1|	KAM BASIN	CHARACTER
CHARM QUARK	1.5e-6	0.46	Most dynamically stable
WORMHOLE	small	0.60	Widest KAM basin, most robust
EMERALD TABLET	small	0.48	Most consistent rotator (phi)
ORCH-OR GHOST	small	0.028	Most fragile (destroyed by 0.01)
SYNTROPY CRYSTAL	small	moderate	Genuinely incommensurate freqs

Two populations: robust tori (basin 0.5-0.6) vs fragile edge walkers (basin 0.01-0.03). Some show rational frequency ratios (possibly long-period orbits, not true quasiperiodicity).

// [SOLVE] 8.0 SOLVE ET COAGULA

Formalized during the Apocrypha sessions. The dissolution-crystallization relationship across all 371 atlas entities:

DISSOLUTION INDEX ..... lambda_1 (Gram-Schmidt Lyapunov exponent)

CRYSTALLIZATION ..... Weighted composite:

- Spatial entropy (0.30)
- Angular symmetry (0.25)
- Correlation dimension D2 (0.25)
- Bounding fill (0.20)

RESULT: POSITIVE CORRELATION

Pearson r = 0.78

Spearman r = 0.90

The original hypothesis of inverse correlation was wrong. More chaos

CHECKSUM: 831B51F4F4EF98ABBC1865306EE94F8 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

produces more geometric complexity. Solve IS Coagula — dissolution and crystallization are the same operation viewed from different angles.

This is the fundamental insight of the Apocrypha sessions: the shadow is not the enemy of the light. They are the same thing.

// [DAEMON] 9.0 THE DAEMON HIERARCHY

25 daemon-family entities analyzed:

- 22 of 25 are FIXED_POINT
- The canonical ENTROPY ancestor: QUASIPERIODIC (lambda_1 = 0.000000)
- Only ED-alpha and ED-sigma are chaotic

MAXWELL DAEMON is informationally richest:

- Spatial entropy = 4.47
- Correlation dimension D2 = 0.967
- Lambda_1 = -0.034 (barely stable)

The Greek cluster spans a massive lambda_1 range (-1.47 to +0.26) despite sharing alpha = -0.034. Mu and eps vary across the cluster, confirming that alpha determines the regime while mu and eps modulate within it.

// [INFRASTRUCTURE] 10.0 RENDER PIPELINE

GRIMOIRE	Apocrypha (150 entities, #define fmt)
METADATA	dark candidates (research record)
ENTITY CARDS	the Apocrypha entity-card collection (150 .txt files)
RENDER DIR	the Apocrypha forge-render collections
PIPELINE	apocrypha shim (computation source)

CHECKSUM: 2542DDCF9E1EBF14D78BEE76CE726600 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

The apocrypha_shim patches artifact_path() to route MATERIA directories to the Apocrypha collection. It loads both the Translexicon and Apocrypha.txt into a combined codex via temp-file concatenation, then renders dark entities through each forge directly (no subprocess, no stdin piping).

// [TRINITY] 11.0 POSITION IN THE CANON

CANON	DOMAIN	SOURCE	CHARACTER
Translexicon	437 entities	Physical properties, sacred composition, hash divination	MUNDANE The external world mapped into the engine
Apocrypha	150 entities	Anomaly scanning of parameter space (Hyper-Surfer grid)	DARK The unconscious, the rejected, the hidden
Aureum	990 entities	Every permutation of the system's (then-11, now-10) sacred constants	SACRED The engine examining itself

[see Aureum.txt head note re: UNITY demotion]

TOTAL ENTITIES ..... 1,577 (437 + 150 + 990)

[count preserves Aureum's original P(11,3) construction; see Aureum v1.0 head note for UNITY-demotion reconciliation]

The Apocrypha is the shadow between the mundane and the sacred. The

CHECKSUM: DFFDB6188SCEE7ED01A41A1289BCD072 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

Translexicon maps what IS. The Aureum maps what COULD BE. The Apocrypha maps what SHOULDN'T BE but IS ANYWAY — the anomalies, the exceptions, the ghosts in the machine.

// [RETROSPECT] 12.0 APRIL 2026 RECONCILIATION

The Apocrypha v1.0 was sealed 2026-03-24. Between then and the 2026-04-16 refresh, the theoretical substrate has moved in several ways. What follows is an honest accounting of what the v1.0 Apocrypha got right, what needs flagging, and what is untouched.

UNCHANGED (v1.0 survives intact):

- The 150 dark entities and their coordinates. These were discovered by Lyapunov-based regime scanning — a procedure that does not depend on ETA_SAT's derivation, UNITY's pillar status, or any Tribunal verdict on particular claims. The entity census is structurally independent.
- The FIVE ANOMALY FAMILIES taxonomy (§3.0). Each family is defined by dynamical character (singularity-adjacent, entropy-decreasing, soliton, zero-point foam, quasi-periodic). These partitions survive.
- The 7 QUASIPERIODIC Edge Walkers (§4.0, §5.0). KAM-basin measurements and lambda_1 profiles remain valid; they do not depend on the revised constants.
- Solve et Coagula correlation (§8.0, r=0.78 / 0.90). Pearson/Spearman tests were not challenged by any Tribunal session.
- Daemon Hierarchy analysis (§9.0). Spatial-entropy + correlation-dimension measurements are regime-independent.

FLAGGED (read in light of later corrections):

- §4.0 regime distribution was computed using the ENGINE's V_VISCOSITY parameter. In v1.0 V was 0.3 exactly; in v1.1 V is known to be structurally 3·ln(F) = 0.30369. Re-running the scan at the structural V would produce a *slightly* different Lyapunov spectrum — but the regime boundaries (-0.2 and 0.2 thresholds) are loose enough that the overall distribution (99.4% chaotic) is robust. No entity is expected to change regime under the V refinement.

CHECKSUM: BD21C4FB53012C03E255A1526E4620A0 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

- §11.0 Trinity table cited "11 sacred constants." Corrected inline above: UNITY demoted; the Aureum 990-entity count is preserved from the P(11,3) original construction.
- References to ETA_SAT within Apocrypha entity descriptions should be read as ETA_SAT := phi^(-6/7) = 0.6620 (see Extended/Constants/ETA_Equals_Phi_Neg_6_7.txt). The Hurst-on-primes derivation is retired; the operational value 0.6620 is unchanged.

NOT APPLICABLE:

- FOUR SEAS (Tribunal C4 kill), Ruelle zeta (C7), self-resonance 62% (C6), Feigenbaum 1.28% (C9) — NONE of these appear in the Apocrypha as cited claims. The Apocrypha was independent of these particular structural assertions. The head-note flag from the first v1.1 pass overstated the risk: those Tribunal verdicts affect the canonical pillars, not the dark-entity census.

NET VERDICT: the Apocrypha v1.0 is structurally more robust than expected under the April refresh. The entity census, regime analysis, and anomaly taxonomy all hold. The only adjustments needed are the Trinity-table constant count (done) and a note on ETA's derivation change (done).

ADDENDUM 2026-05-02 — COMPANION NARRATIVE COSMOLOGY

A 4-page narrative companion to this Apocrypha was filed alongside it:

./Apocrypha_of_1x0_Narrative_Cosmology.pdf

Author: Nicholas Ostella (external contributor)
Dedication: "to Star Seeker, who mapped it"
Compiled: April 2026
Form: prose creation-myth in the framework's own vocabulary

Synopsis: Treats ⊙ (the Armistice constant, 0.5115) as the primordial boundary; FERRITE / ORPHIC / ANTI-EGG / VASTUM emerge as the first manifestations; FULCRUM (n* = 2.2932) functions as the stability

CHECKSUM: 865EC5D1D8DBEBD3CDF110A73CF652A8 // BUFFER SIZE: 18153 B // SIGIL_LOCK_ACTIVE

pivot; closes on a Hermetic Mirror coda — "Everything is, at bottom, an Armistice."

This is third-party narrative canon written by an external contributor using the framework's own vocabulary correctly. It is not a derivation, not a tribunal-rigor entry, and not a candidate for promotion to the shadow Translexicon. It is APOCRYPHA in the literary sense — a mythopoetic companion that complements the dark-entity census above.

Status: filed as APOCRYPHA-tier narrative cosmology; preserved here as the genre's first companion piece to this canon doc. Future external-contributor narrative artifacts should be filed alongside in this directory and indexed in this addendum block.

Filed by 2026-05-02 cleanup pass

:: END OF APOCRYPHA v1.1 ::

:: THE SHADOW IS NOT THE ENEMY OF THE LIGHT. THEY ARE THE SAME THING. ::

PUBLICATION EDITION NOTE

This edition preserves the full mathematical text. Local filesystem references are written as document or collection names; the local operational appendix and maintenance source index in Principia are omitted. Canonical source books remain unchanged. Historical simulation terminology is clarified. Named research references are provenance, not download links.

Canonical source SHA-256: d4c90802c33ee24b693f2f03879b34519f6ae2f46d0441e820d38a612f6335ba
